Endotoxin Testing — USP ⟨85⟩

Test	Specification	Result	Status
Endotoxin (USP <85>)	Report Result	≤ 0.05 EU/mL	Reported

About this result: *Endotoxin is reported as a quantitative value. Acceptable limits vary by product type and matrix, so no universal pass/fail threshold applies to RUO products. This result is below commonly referenced endotoxin thresholds.*

HPLC Chromatogram

NOTES & METHODOLOGY

Per-component content calculated from total net peptide content using the manufacturer's stated formulation ratio. All components confirmed present by HPLC identity testing, unless explicitly stated otherwise.

Sample confirmed to be BPC-157/TB-500 by HPLC. Identification by chromatographic retention time comparison with a reference standard.

Elemental impurities analyzed by ICP-MS per USP 〈233〉.

Bacterial endotoxin testing performed by Limulus Amebocyte Lysate (LAL) method per USP 〈85〉.

Sterility testing performed by PCR (Polymerase Chain Reaction) method.

Peptide purity determined by RP-HPLC area normalization at 214 nm. Value represents the percentage of the target peptide relative to all peptide-related peaks. Non-peptide process-related impurities, if detected, are excluded from the calculation.
