NOTES & METHODOLOGY

1. Identification: Sample confirmed as GHK-Cu by RP-HPLC retention time comparison with reference standard.
2. Purity: Determined by RP-HPLC area normalization at 214 nm. Value represents the percentage of the target peptide relative to all peptide-related peaks.
3. Heavy Metals: Elemental impurities analyzed by ICP-MS per USP methodology.
4. Endotoxin: Tested per USP kinetic turbidimetric method.
5. Research Use Only: This material is for laboratory research use only.
