NOTES & METHODOLOGY

- Identification: Sample confirmed as GHK-Cu by RP-HPLC retention time comparison with reference standard.
- Purity: Determined by RP-HPLC area normalization at 214 nm. Value represents the percentage of the target peptide relative to all peptide-related peaks.
- Heavy Metals: Elemental impurities analyzed by ICP-MS per USP methodology.
- Endotoxin: Tested per USP kinetic turbidimetric method.
- Research Use Only: This material is for laboratory research use only.
